## **DETAILED ACTION**

### ***Specification***

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: FREQUENCY SYNTHESIZING CIRCUIT  
HAVING A FREQUENCY MULTIPLIER FOR AN OUTPUT PLL REFERENCE SIGNAL.

### ***Drawings***

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Coy US  
6107891.

Coy discloses in Figure 3 (Col.3, line 66 - Col. 4, line 14) a frequency synthesizing circuit (300) comprising a frequency multiplier (305) and a phase-locked loop (310, 315, 320, 375), wherein an external reference signal (390) which is frequency doubled (Col. 4, lines 7-14) by the frequency multiplier (305) is employed to be a reference signal (340) of the phase-locked loop for increasing the loop bandwidth of the phase-locked loop. (The structure in the PLL inherently increases the loop bandwidth because it reduces the closed loop noise inside the PLL bandwidth, Col. 2, lines 50-53).

#### ***Allowable Subject Matter***

Claims 3-4 are allowed.

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the best prior art of record, Coy, taken alone or in combination of other references, does not teach or fairly suggest that the phase synthesizer utilizes the multiphase output (Claims 2-4).

#### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yeung et al. discloses a fractional pulse swallowing frequency synthesizer.

Heymann discloses a double PLL in series.

Art Unit: 2817

Gomm et al. discloses a delay locked loop ring oscillator.

Wu et al. discloses a multiphase reference source frequency synthesizer.
